

PROACTIVE SCHEDULING AND MONITORING
Connecting Teams for Success

PSM (Proactive Scheduling and Monitoring)

Optimising Resources Utilization, Timely Delivery

A flexible, proactive and powerful production planning and communication tool. It takes multiple team working together seamlessly and proactively to bring the best of your company.

G.PRO PSM (PROACTIVE SCHEDULING & MONITORING) is a comprehensive production scheduling that allows you to easily create, view, and modify plans. Most importantly it ensures on time delivery and quick creation and processing of production schedules. Unlike a spreadsheet, it is able to deal with complex operational rules and a wide range of scenarios. Powerful yet flexible enough to address your planning needs, it simplifies the planning process, maximizes utilization of your resources and increases productivity.

Detail resources and processes involved for each job such as instructions and material requirements are displayed for easy coordination of workload.

Auto alerts can be set up to notify you before you miss your deadline. This gives you enough proactive information to decide if rescheduling is needed. Hence, allow you to have enough time to rectify the issues.

The 'What If' feature shows how changes on your resources and movements in materials can impact your overall schedule. With easy drag and drop, you can attempt different scenarios before you apply them to your actual plans.

With this data, you can determine proactively if you can meet your delivery deadlines. If not, then you can determine how long you will need to complete it and which orders will be delayed.

The availability of extensive reports can be used for in depth analysis and monitoring performance. Sharing of information across departments or with your customers will be easier than ever. Now you can build better customer relationships by keeping your operations in control and providing comprehensive information to all parties.

With G.PRO PSM, you gain real time visibility into issues affecting your production. With lower uncertainty, you will achieve better control of your production to prevent bottlenecks.

PSM optimizes production planning

Quick Return on Investment:

Daily Capacity Planning

Access to capacity planning with the options between daily line capacity or SAM (Standard Allowable Minutes)

Real Time Reports

Provides comprehensive and timely information which you can print off the web regardless of where you are

Visual Alert System

Auto alert and warning messages will be sent out to prompt planner of outstanding events and conflict between plans

Off Target Plans

To keep you notified, an auto prompt window will show detail of each off target plan

Simulation Planning

Planning Calculator provides simulation results when planner plans with 'What if' scenarios

Group MO

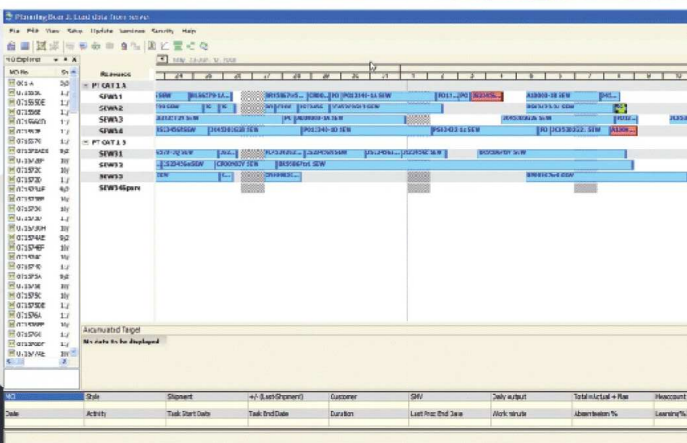

Gives you the ability to plan multiple MOs with the same date, or MO's with the same style and shipping deadlines

Improve Communication

Strengthen communication between you and your customers

Personalized Planning

With individual access level controls, each planner can have different versions of plans to save to the local drive until one is confirmed as the master plan
